

PURE ANIMAL VACCINE.

We have been appointed Sole Agents for Great Britain for the supply of pure Calf Vaccine Lymph, produced at the Elberfeld Establishment for the production of Animal Vaccine, Germany.

This Vaccine is derived from healthy calves, about eight to ten weeks old, which, previous to their vaccination are examined by an experienced veterinary surgeon. Immediately after the Lymph has been taken, the animal is killed, and the lungs examined for Tuberculosis. The Lymph itself also is microscopically examined, after Koch's colouring method, to see whether Tuberculosis Bacilli might be present. The good quality and purity of all the Lymph sent out is thereby assured.

Reports of forty Vaccinating Physicians who have made use of the Vaccine produced at the Elberfeld Institution, shew in 8,810 cases of vaccination, a total average success of $92\frac{1}{2}\%$, viz., $95\frac{1}{2}\%$ from children one year old, and $86\frac{1}{4}\%$ from those twelve years and upwards (revaccinations). The same reports also prove the fact that no complications whatever occurred in all the 8,810 cases of vaccination.

All the Lymph, before being sent out, is subjected to a patent process enhancing its keeping properties, so that it has been found to be still effectual after about 300 days. The fresher the Lymph is, however, the more efficaciously it operates; it is, therefore, more desirable to order fresh Lymph more frequently, than to keep it long in stock.

It will be observed that this Animal Vaccine often presents a slightly turbid appearance.

The advantages claimed for the Pure Animal Vaccine over the human Lymph are—

- 1st.—There is no fear of inoculating syphilis, tuberculosis, or any other disease.
- 2nd.—There is never any erysipelas attending it.
- 3rd.—The vesicles are more perfect and much more protective.

In addition, the price (by special arrangement) is very low, closely approaching that of the ordinary human Lymph.

It is supplied in Bottles of 12 tubes, each bottle in a box at 8/6 each, to account.

Special discount for quantity.

May 1st, 1885.
